Safely Unleashing AI in the Insurance Industry

PITCH DECK 2024

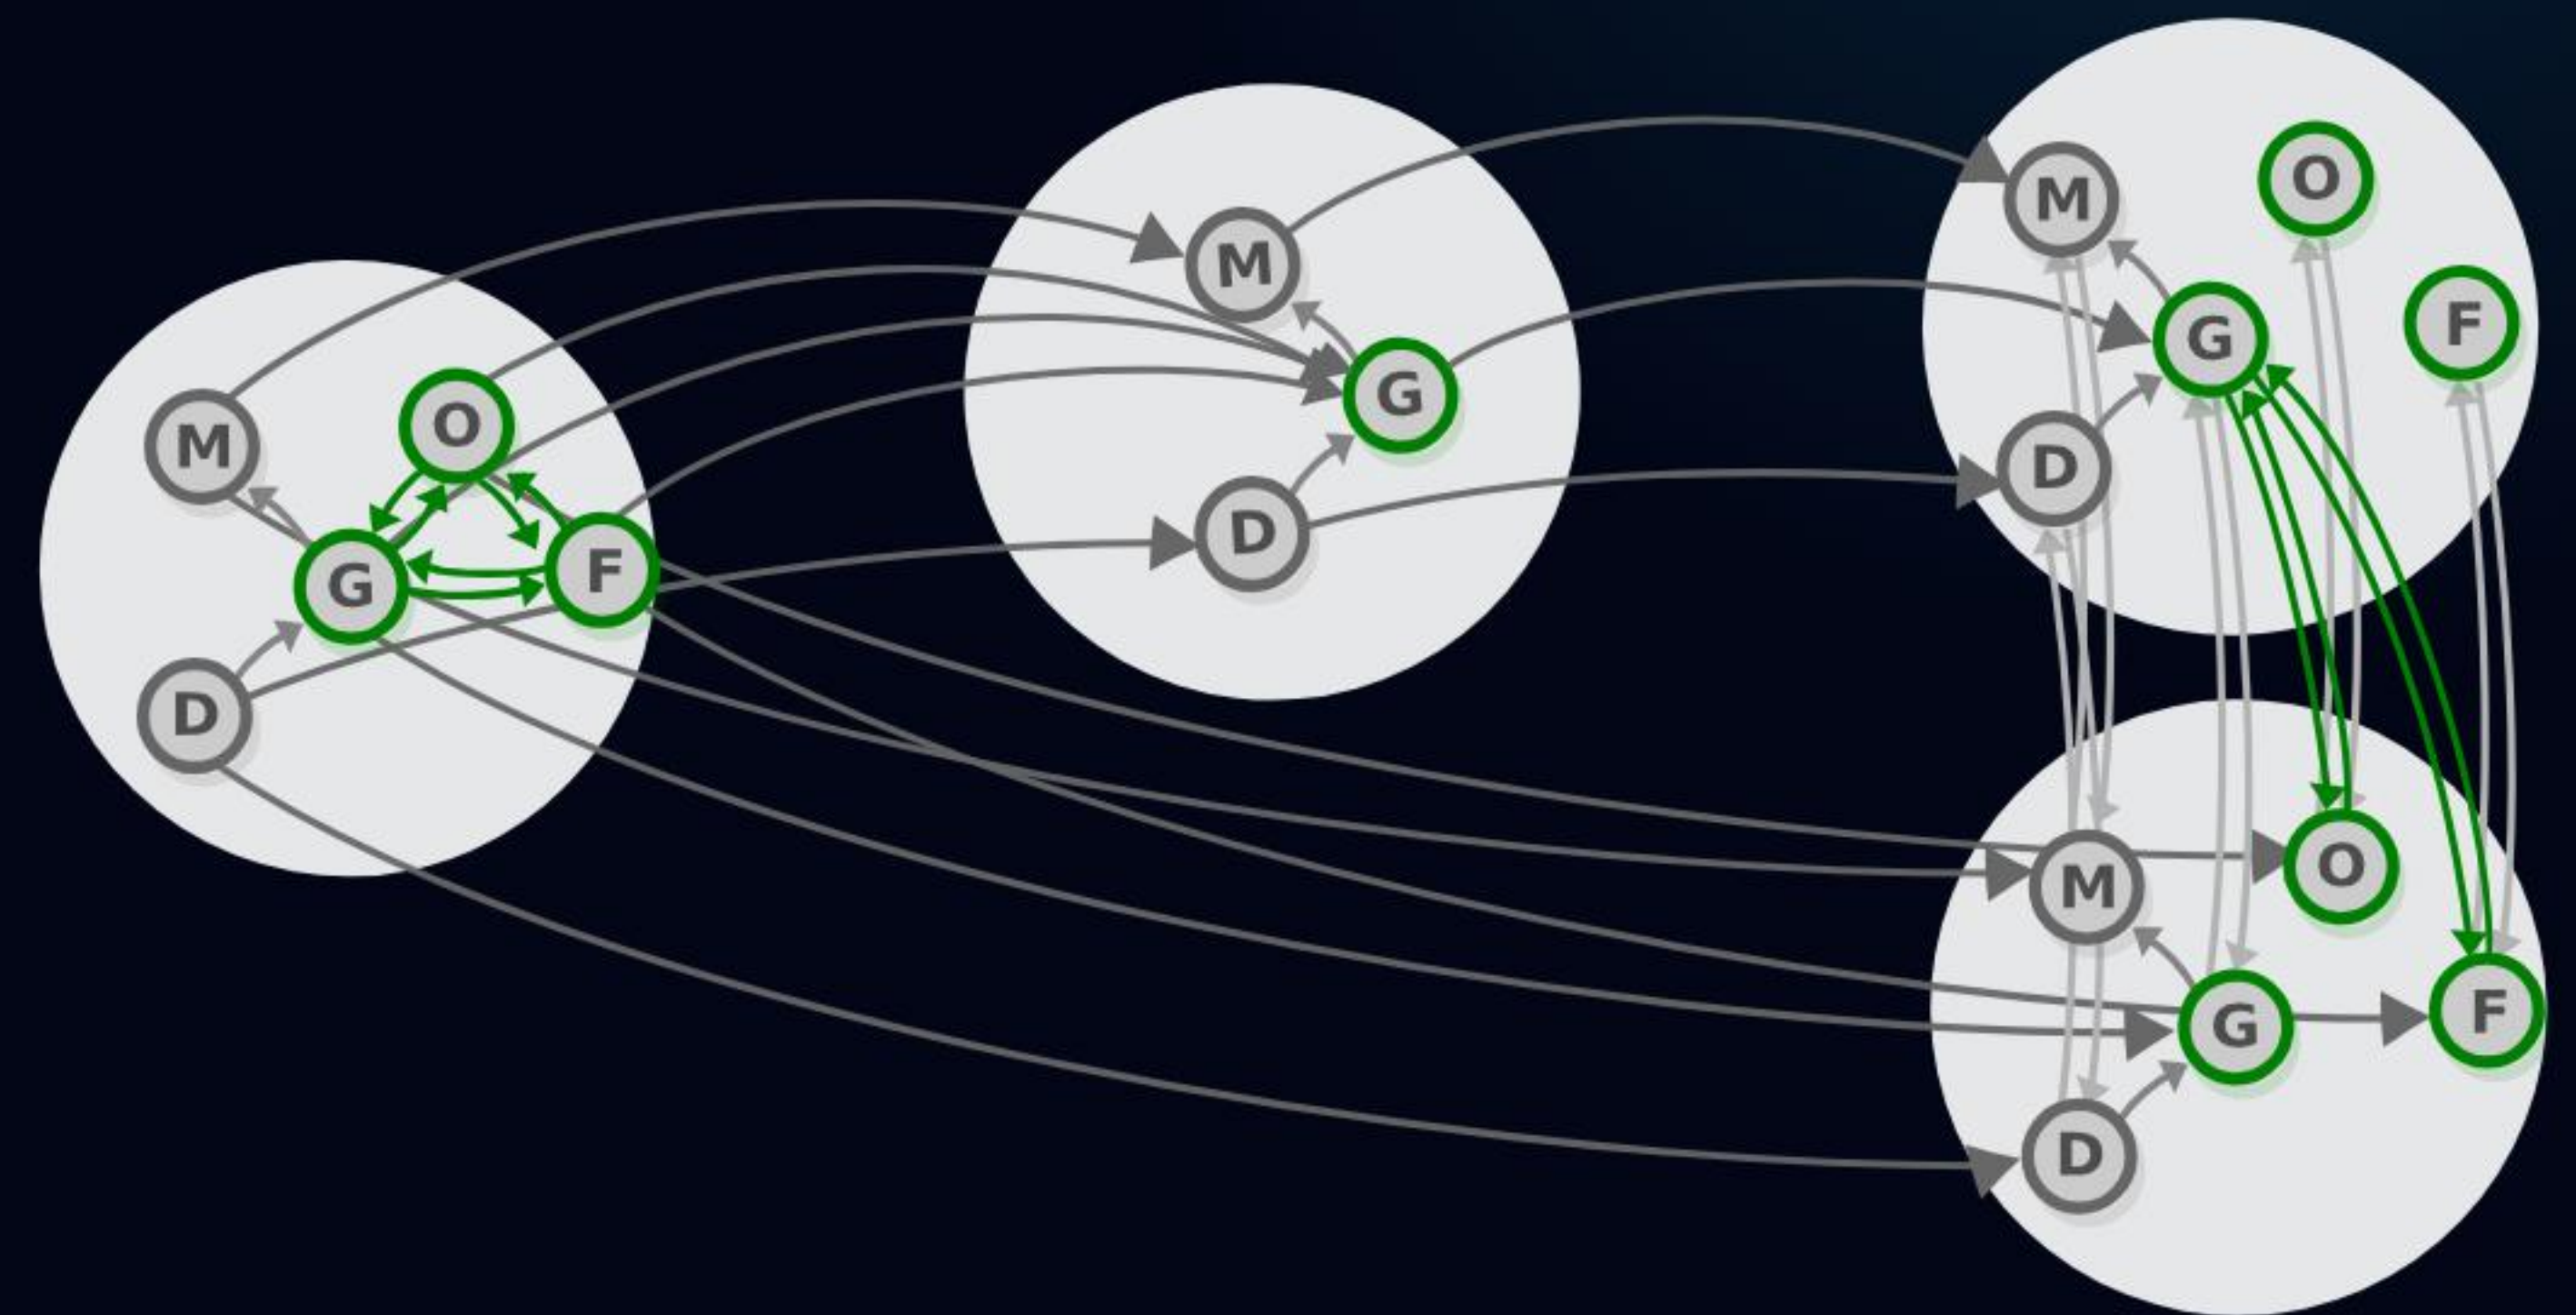

# | The AI / Compliance Collision

## The Mess of Tools

Old-school actuarial math and modern AI speak different languages. They are currently bolted together with fragile, manual code.

## The Compliance Danger

AI models currently spit out prices, while software tries to **"catch" illegal outputs** after the fact. In a regulated world, "oops" isn't an option.

# "Sticky Notes on a Rocket"

Right now, Governance is an afterthought. It is like building a powerful rocket and putting a sticky note on the dashboard that says: **"Don't fly into the ground."**

Bolting compliance onto a model at runtime leaves the door open for bugs. A single glitch can result in **thousands** of illegal contracts before detection.

**The Math of Impossible Mistakes**  
A Paradigm Shift in Insurance Governance

# AI as Standardized Lego Blocks

## Unified Interface

Whether using a 50-year-old formula or a new Neural Network, our system treats them as **Morphisms**.

**The Benefit:** Snap out an old model, snap in a new AI model instantly. No translation needed. They fit the exact same sockets.

# | The Unbreakable Factory Mold

## Governance as a Constraint

Imagine a star-shaped factory mold. You cannot physically get a square block out of it. We've built this into the code.

An AI proposal is evaluated **inside** the context of the laws. If it violates a rule, the contract object **literally cannot be constructed**.

# | The Universal Scorecard

## Hard Rules

Illegal attributes (Race, Gender in some regions) are strictly prohibited at the mathematical level.

## Soft Rules

Risk scoring adjustments (e.g., driver history) are fused into the same logical pipeline.

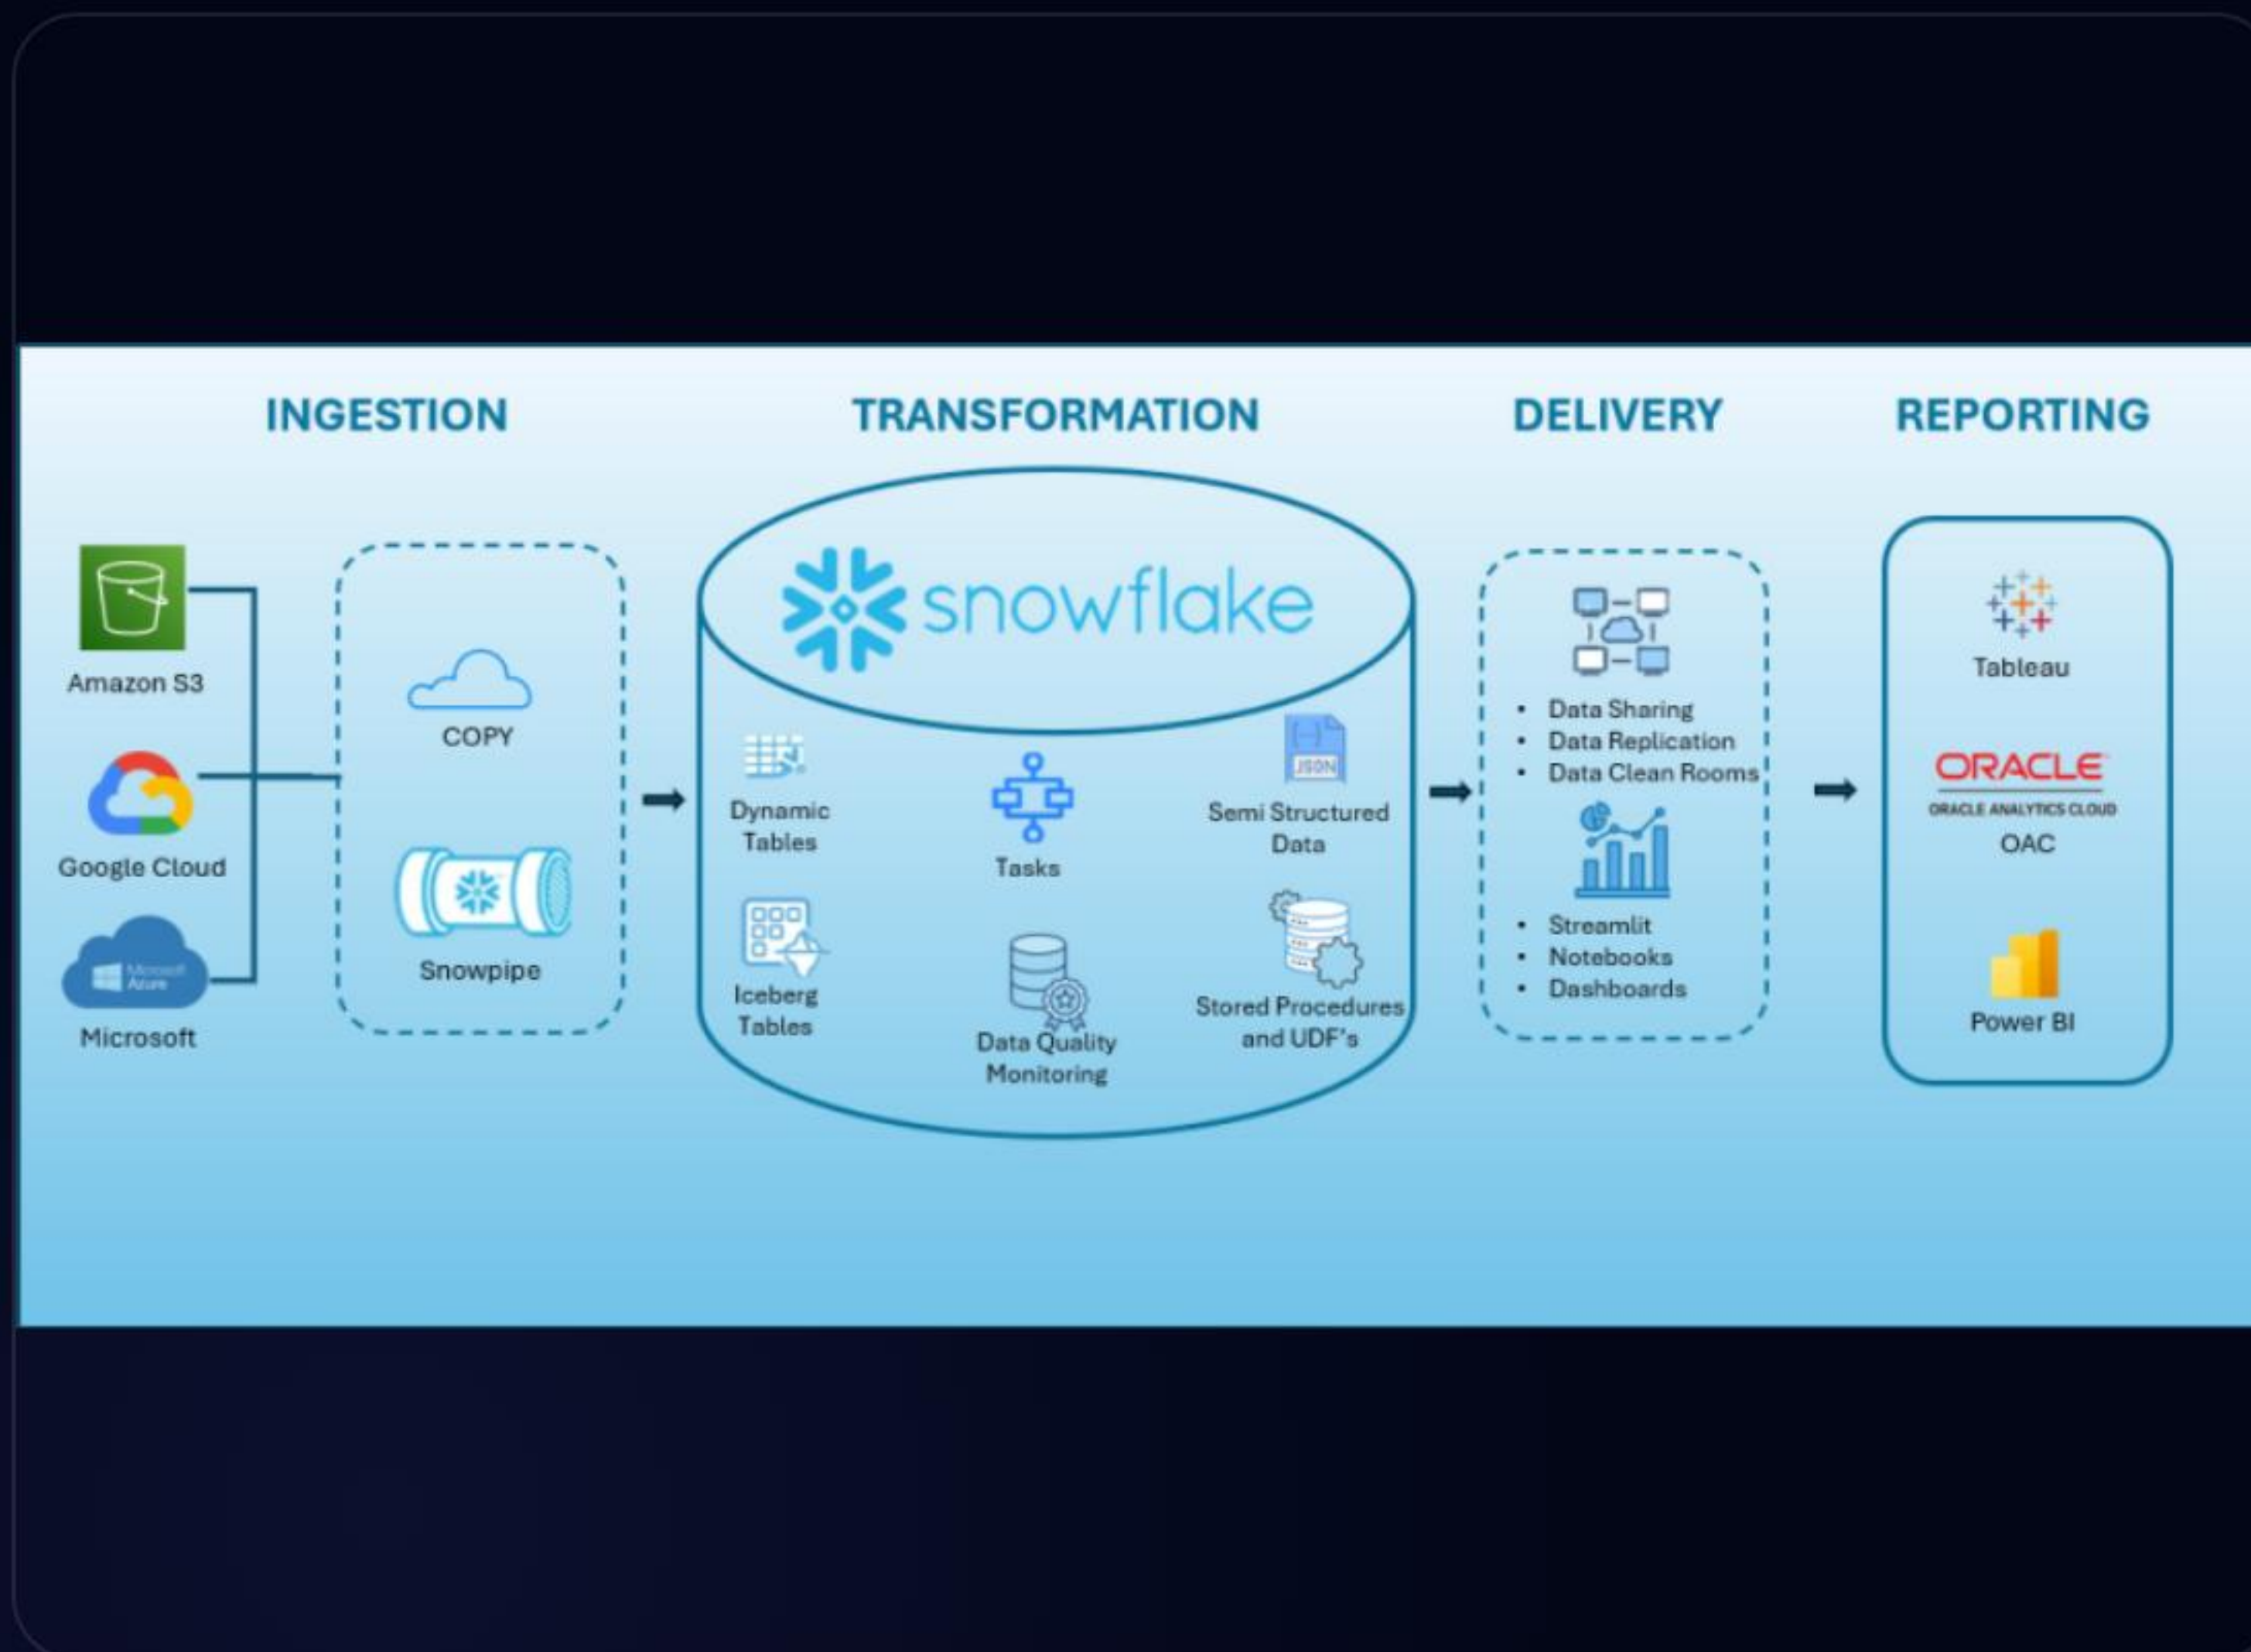

## Scalability

Stack thousands of complex regulations without slowing down. Math ensures consistency.

# Ready for the Big Leagues

- **Zero Data Movement:** Built directly on Snowflake. Models run where data lives.
- **Privacy by Design:** Military-grade tokenization. AI never sees customer PII.
- **Right to Erasure:** Mathematical "tombstoning" hides data instantly without retraining.

# | The Investment Thesis

92%

Insurers Exploring AI

## The Safety Net

Carriers are terrified of the blowback from AI hallucinations. We don't just "catch" errors; we make them un-programmable.

**Absolute mathematical guarantee** that their business is protected from illegal or catastrophic contracts.

## | Our Vision

// *"Categorical Insurance provides the ultimate safety net, allowing actuaries and scientists to move fast with the absolute certainty of protection."*

— PROJECT CATEGORICAL

# Deployment Roadmap

## Phase 1

MVP Launch & Beta  
Testing with Tier 1  
Carriers.

## Phase 2

Snowflake Native App  
integration.

## Phase 3

Expansion to Highly  
Regulated Finance.

## Phase 4

Global Standard for AI  
Governance.
